FOR IMMEDIATE RELEASE:

PARIS Technologies to Introduce Internet Data Services at the BARC OLAP and BI Conference

Doylestown, PA - November, 1 2007 – Internet Data Services is a brand new functionality for OLAP users. On November 13th—14th, the BARC Business Intelligence conference in Germany will be held with all the big-wigs in the OLAP and Business Intelligence sector. On November 13th at 4:00 PM in Würzburg, Germany, PARIS Technologies, an OLAP developer for more than 15 years, will be formally introducing their newest functionality—Internet Data Services. Internet Data Services, or IDS, allows users to transfer fact data from a server database cube on the network or internet, to the local database cube.

IDS allows users—for the first time—to securely access a database using just the internet, work locally with that data, and then synchronize to update the database when he or she has finished. That's what PowerOLAP Internet Data Services is all about. Not only is data contained in a multidimensional environment, but it is internet-and Excel-friendly. From PARIS's constant development, PowerOLAP is a revolutionary product with IDS as its most recent innovation: it's cost-effective, Excel friendly, contains an independent OLAP engine, and is a particularly powerful mid-market solution.

Having just opened offices in Munich, Germany, PARIS is proud to be presenting at the BARC conference. "In Germany, this is the mother of all OLAP conferences with the most visibility. We are thrilled to share our innovations with the other developers out there," says Dirk Schittko, Managing Director at PARIS Technologies International, Inc. in Germany.
