

PowerAnalytics

Overview

Intelligent Performance Management Suite for SAP® Business One. **Finally, an Intelligent Solution**

PowerAnalytics 2.0 is the complete platform for real-time budgeting, planning, forecasting, predictive analytics, dashboards, KPIs, compliance and consolidations for SAP® Business One.

The PowerAnalytics 2.0 application allows users to create unlimited reports and perform Business Intelligence analyses through the familiar Excel spreadsheet. Version 2.0 automatically integrates Financial, Sales and Project Management data!

PowerAnalytics 2.0 provides advanced, easy-to-create reports—by Account, Division, Region, Department, Project, Sales Opportunity and many others. Beyond flexible reporting, users can access the data they need for planning, analysis and multi-company consolidations.

PowerAnalytics is an out-of-the-box solution that empowers users by dynamically mapping to SAP® Business One for the automatic creation of multidimensional data objects (cubes) containing rich financial, project management and sales information.

PowerAnalytics enables companies to create unlimited standard and

ad hoc reports, as well as business analyses, KPIs, and multi-company consolidations. User access is via the everyday spreadsheet, but now with a sophisticated, agile Business Intelligence component.

Eliminate manual tasks for all the Excel users in your organization and achieve double productivity.

PowerAnalytics provides advanced, online planning, budgeting and forecasting, to direct a company toward future success. The standalone per-user price makes this powerful solution accessible to even the smallest firm, providing the fastest, most cost-effective way to implement dynamic online reporting, analysis and planning solutions from SAP® Business One.

PowerOLAP® Professional Suite takes PowerAnalytics innovations to full throttle. A fully empowered PowerOLAP® system delivers solutions beyond the standalone version's advanced functionality and connectivity to SAP®.

The Professional Suite adds expanded Server and multi-user capabilities including the PowerOLAP® MDB Server, comprehensive user- and group-based security, the ability to integrate data from other data sources (OLAP Exchange® connectivity to ODBC data sources), and a Web Server.

PowerAnalytics 2.0 Features:

- » *Multi-Company Consolidations*
- » *Strategic Planning*
- » *Maximizing Profitability*
- » *Budgeting and Forecasting*
- » *Integrating External Data*
- » *Dashboards, KPIs and Reports*
- » *Predictive Analytics*

The Professional Suite also expands the options available to include Portal Server capability, providing HTTP and XML connectivity to Web-based reporting tools for outstanding Flash file dashboard graphics.

Instant access to better information and improved planning and forecasting capabilities will enable you to significantly increase revenues and profitability.

PowerAnalytics brings enterprise-quality, user-friendly solutions to the small-to-medium market that SAP® is serving with SAP® Business One.

With PowerAnalytics you can create Consolidation, Business Intelligence and Corporate Performance Management solutions that were available only with huge price tags and only to the largest customers. PowerAnalytics provides user-friendly, enterprise-quality solutions to organizations of every size at a very smart total cost of ownership. A quickly implemented, cost-effective application for advanced business analytics,

PowerAnalytics makes Fortune 1000 features and capabilities accessible to everyone that uses SAP® Business One.

Mapping to finance, project management and sales data in SAP®Business One is automated, allowing the immediate generation of multidimensional cubes of previously static relational data.

Once the data is in cubes, PowerAnalytics users are able to manage data intuitively with a logic that is familiar to Excel users. Building or altering a model can be accomplished quickly, with end-user skills.

All manner of internal formulas are available for sophisticated calculations—it has never been easier to create new company metrics and analytics. With drag-and-drop, double-click speed, users create virtually any

cross-dimensional perspective, or Slice, of data. There is no end to the reports that users can create, with outstanding graphics available via a few key strokes.

PowerAnalytics uses the Excel spreadsheet as a front end, so with the click of a button any Slice can be viewed through Excel; any report containing literally thousands of cross-data views can be saved as a single spreadsheet; and any file can make full use of all of Excel's formatting and graphical capabilities.

From Excel, users can also enter data through the familiar spreadsheet interface to test "what if" analytical scenarios. Note that all data is stored within the cubes, not Excel.

Spreadsheets created via PowerOLAP® (the engine that runs PowerAnalytics) maintain a dynamic connection to source cubes, retaining their standard Excel formula, formatting and graphical capabilities.

SAP® Certified Integration

PowerOLAP® is the very definition of "Excel-Friendly" OLAP!

I fell in love with the OLAP and Cubing tools...

- review of PowerAnalytics by an SAP®Business One User.

"Installation was easy... It's a big relief to FINALLY have a solution!"

-review by a PowerOLAP user
